

General Capacity – Materials Handling

CASA is an experienced provider of Structural, Mechanical and Piping (SMP) services to the mining industry including:

- Mechanical and Electrical installation of process equipment (crushing, milling etc.).
- Supply, fabrication and on site installation of structural steel and plate-work for machinery supports, conveyor structures, chutes, hoppers and general workshop/administration buildings.

We place emphasis on planning our activities using strict quality control measures and we are able to mobilise promptly to remote sites due to support from our two in-house drafting and fabrication workshops and utilisation of our own fleet of plant/machinery.
